

PD-120-9-UPS

Power supply distribution box

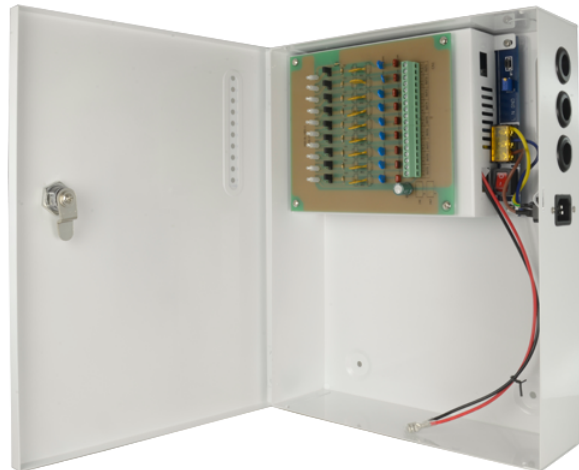

1 AC input 110 V ~ 220 V

9 outputs

Protection by resettable PTC fuse

Output voltage 12 V / 120 W

UPS function (SAI)

Power distribution cabinet. 12V with UPS function.

It is used to feed multiple cameras or other security devices from a common source by adding individual protection. It allows to supply direct current voltage to up to 9 devices. It has a power input via AC outlet (AC 110 ~ 220 V) and 9 outputs of continuous power supply, with clamp connector. Each output has PTC fuse protection that, at failure, cuts the circuit and then resets, instead of melting as with conventional fuses. It also has protection against short circuits and power surges.

Provides DC voltage 12 V adjustable and total power of 120 W to be distributed among the 9 channels. It comes in a metal box for added protection, with protected cable inputs and lockable with key. Incorporates a UPS function and has an internal space for the battery. Under normal use the power supply maintains and charges the battery. If the mains supply is interrupted the battery takes over and the security system keeps working. Recommended battery: 12V @ 7AH (not included). Button for battery test.

Specifications

Power supply input	AC 110 V - 220 V 50/60 Hz
Power supply outputs	9 outputs via copper pair (clamp)
Output voltage	Adjustable 12V
Output power	120 W
UPS function	Recharge and supply (recommended battery 12 V / 7 AH)
Power supply Protection	PPTC Fuse
Dimensions	315 (H) x 235 (W) x 62 (D) mm
Weight	2400 g
